DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 14, 16 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Poulson.

Figure 1 of Poulson teaches a portable device as recited in claims 14 and 17 comprising an attachment module (16, 20, 22, 24 including the entire hook) for removably connecting to a wearer (the clip connects it to the wearer yet it is removable) and a display module (cell phone case 10 and the display of the telephone mentioned on column 1, lines 55-59) defining a window for displaying information (cell phone cases have windows for at least displaying the selection buttons of the numeral pad as confirmed by column 1, lines 55-58) wherein said display module is extendably and retractably (the leash cord extends and retracts) connected to said attachment module (the leash cord is connected to its housing, 16) wherein the display module and said attachment module are adapted to be substantially prevented from moving relative to one another when said display module and said attachment module are retractable connected (when the hook is coupled to the eye as shown in Figure1, the display module cannot be moved away from attachment module and vice versa.)

With regard to the limitations of claims 16 and 17 of “an actuator assembly in said display module”, this feature is also taught by Poulson. More particularly, an “actuator” is “a mechanism for moving or controlling something indirectly instead of by hand” according to Webster’s Ninth New Collegiate Dictionary. Accepting this definition then, it is clear that the display module (i.e., the cell phone display) is controlled by a mechanism or an actuator that causes images to appear.

In response to Applicant’s arguments, it is true that the hook and eye connection of Poulson does not eliminate all movement between the two modules; however, it does restrain movement and prevents certain movements altogether. Since the claim language does not require a cessation of movement and Poulson does “substantially” prevent movement, the degree of play between modules seen in the Poulson reference does not surpass the amount made permissible by the claim language.

Allowable Subject Matter

Claims 1-7, 9-11 and 13 are allowed.

Claims 15 and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
